

**Using STAT PLOT and finding a best fit line or curve:**

1. Given a set of data:

x	1	2	5	8	11	14	17
y	1100	1300	1800	2200	2500	2800	3000

2. Enter the Data into the calculator:

3. Turn on STAT PLOT:

4. Graph the data

5. Find the line of best fit and send the equation over to the y-plot

6. When Y= is opened you will see the equation has been placed for graphing, and a line will be drawn of best fit

**STAT – ENTER**
