

Precalculus
Lesson 9.2 Graphs of Polar Equations
Mrs. Snow, Instructor

As we studied last section points may be described in polar form or rectangular form. Likewise an equation may be written using either polar or rectangular coordinates. Depending on specific equation, one form may be easier to understand and graph than the other. Below are some common polar graphs and their equations written in both polar and rectangular forms.

| Lines | | | |
|-----------------------------|---|--|---|
| Description | Line passing through the pole making an angle α with the polar axis | Vertical line | Horizontal line |
| Rectangular equation | $y = (\tan \alpha)x$ | $x = a$ | $y = b$ |
| Polar equation | $\theta = \alpha$ | $r \cos \theta = a$ | $r \sin \theta = b$ |
| Typical graph |  |  |  |

To plot points we use polar coordinates and a polar grid.

| | |
|--|---|
| <p>The points (r, θ) of</p> <p>radius = 6, with $\theta = \frac{5\pi}{6}$ and</p> <p>radius = 4, with $\theta = \frac{\pi}{4}$</p> <p>Special graphs: $\theta = \text{constant}$ – a line at angle θ $r = \text{constant}$ – a circle of radius r</p> <p>Sketch the graph of the equation and express the equation in rectangular coordinates:</p> <p>$r = 3$</p> |  <p>$\theta = \frac{\pi}{3}$</p> |
|--|---|

Graphing a Polar Equation of a Line:

Some equations can easily be expressed in rectangular coordinates. If this is the case then convert to rectangular coordinates.

Identify and graph the equation

$$\theta = \frac{\pi}{4}$$

Remember the formulas from section 1 that relate x and y to r and θ :

Identify and graph the equation

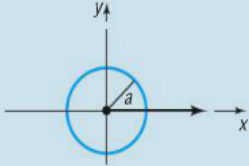

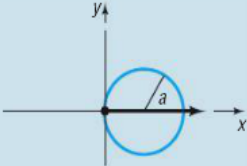

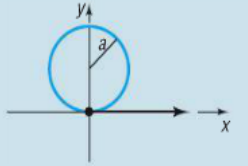

$$r \sin \theta = 2$$

Identify and graph the equation

$$r \cos \theta = -3$$

| Circles | | | |
|-----------------------------|---|---|---|
| Description | Center at the pole, radius a | Passing through the pole, tangent to the line $\theta = \frac{\pi}{2}$, center on the polar axis, radius a | Passing through the pole, tangent to the polar axis, center on the line $\theta = \frac{\pi}{2}$, radius a |
| Rectangular equation | $x^2 + y^2 = a^2, a > 0$ | $x^2 + y^2 = \pm 2ax, a > 0$ | $x^2 + y^2 = \pm 2ay, a > 0$ |
| Polar equation | $r = a, a > 0$ | $r = \pm 2a \cos \theta, a > 0$ | $r = \pm 2a \sin \theta, a > 0$ |
| Typical graph |  |  |  |

Graphing a Circle

Sketch the polar equation (transform the equation into its rectangular form)

$$r = 4 \sin \theta$$

Sketch the polar equation

$$r = -2 \cos \theta$$

Other Equations (pg. 581)

Limaçons

$$r = a \pm b \sin \theta$$

$$r = a \pm b \cos \theta$$

$$(a > 0, b > 0)$$

Orientation depends on the trigonometric function (sine or cosine) and the sign of b .

$a < b$
limaçon with inner loop

$a = b$
cardioid

$a > b$
dimpled limaçon

| Name | Limaçon inner loop | Cardioid | Limaçon no inner loop has a dimple |
|-----------------------|---|---|---|
| Polar Equation | $r = a \pm b \cos \theta$ $r = a \pm b \sin \theta$ $a < b$ | $r = a \pm a \cos \theta$ $r = a \pm a \sin \theta$ $a = b$ | $r = a \pm b \cos \theta$ $r = a \pm b \sin \theta$ $a > b$ |

Equations in terms of cosine will be symmetrical about the polar axis (horizontal).

Equations in terms of sine will be symmetrical about the $\frac{\pi}{2}$ axis (vertical).

Cardioid graphs

$a = b$, distance on axis is $2a$

if cosine, then along polar axis

$$r = 1 + \cos \theta$$

$$r = 1 - \cos \theta$$

if sine, then along $\pi/2$ axis

$$r = 1 + \sin \theta$$

$$r = 1 - \sin \theta$$

Cardioid – heart shaped (pg. 581)

graph $r = 2 - 2 \sin \theta$

a= _____ b= _____

The numbers indicate a shape of _____

equation has sine so along _____ axis

Negative means: _____ length = _____

Whenever you cannot remember how to graph the polar equation, you can always graph a period of the trig function from $0 \leq \theta < 2\pi$ and transfer the data over to a polar graph. Don't rely on memorizing an equation and associated graph shape, you will want a backup method!!

Table of values (use values for theta that yield friendly values for r):

| | | | | | | | |
|------------------------|---|-----------------|-----------------|------------------|-------|------------------|--------|
| θ | 0 | $\frac{\pi}{6}$ | $\frac{\pi}{2}$ | $\frac{5\pi}{6}$ | π | $\frac{3\pi}{2}$ | 2π |
| $\sin \theta$ | 0 | 1/2 | 1 | 1/2 | 0 | -1 | 0 |
| $r = 2 - 2\sin \theta$ | 2 | 1 | 0 | 1 | 2 | 4 | 2 |

Limaçon graphs

$$r = a \pm b \cos \theta$$

$$r = a \pm b \sin \theta$$

if *cosine*: along polar axis

if *sine*: along $\frac{\pi}{2}$ axis

a. Limaçon no inner loop if :

$$a > b$$

b. Limaçon has an inner loop if:

$$a < b$$

Graphing a limaçon without an inner loop

Sketch the graph of the equation
 $r = 3 + 2 \cos \theta$

Graphing a limaçon with an inner loop

$$r = 1 + 2 \cos \theta$$

More Equations

Roses

$$r = a \sin n\theta$$

$$r = a \cos n\theta$$

n -leaved if n is odd

$2n$ -leaved if n is even

$r = a \cos 2\theta$
4-leaved rose

$r = a \cos 3\theta$
3-leaved rose

$r = a \cos 4\theta$
8-leaved rose

$r = a \cos 5\theta$
5-leaved rose

Rose with even/odd petals

$$n: \begin{cases} \text{odd} = n \text{ petals} \\ \text{even} = 2n \text{ petals} \end{cases}$$

$$r = a \sin n\theta$$

$a = \text{length of petal}$

$$r = a \cos n\theta$$

Graphing a Polar Equation: n -leaved rose (petals)

$$r = 2 \sin 3\theta$$

$$r = 2 \cos 2\theta$$

Lemniscates – Figure 8 shaped curves

$$r^2 = a^2 \sin 2\theta$$

$$r^2 = a^2 \cos 2\theta$$

$a = \text{petal length}$

$$r^2 = 9 \sin 2\theta$$

$$r^2 = 2^2 \cos 2\theta$$

Graphing a Polar Equation (spiral)

It is the locus of points corresponding to the locations over time of a point moving away from a fixed point with a constant speed along a line which rotates with constant angular velocity.

There are several equations that will produce a spiral. The **logarithmic spiral**

$$r = e^{\theta/5}$$

may be written as $\theta = 5 \ln r$

Archimedes Spiral is in the form of

$$r = a\theta$$
