## **Precalculus**

## Lesson 5.6: Logarithmic and Exponential Equations Mrs. Snow, Instructor

We are now able to apply the previous lessons' formulas to solving logarithmic and exponential equations using algebraic techniques.

## Solve:

| $2log_5x = log_59$ | $log_5(x+6) + log_5(x+2) = 1$ |
|--------------------|-------------------------------|
|                    | 11.03(1.1.1) 1.103(1.1.1)     |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |
|                    |                               |

| ln x + ln(x - 4) = ln(x + 6) | $2^{x} = 5$          |
