Lesson 6.5 Part 2: Graphs of the Tangent and Cotangent Functions

Mrs. Snow, Instructor

Tangent function facts:

- $y = \tan \omega x$     period =  $\frac{\pi}{\omega}$
- $\tan x = \frac{\sin x}{\cos x}$ ,  $\therefore$  when  $\sin x = 0$ ,  $\tan x = 0$   
when  $\cos x = 0$ ,  $\tan x$  is undefined!
- **Tangent graph will have asymptotes at values of x where the function is undefined:**  
 $x = \frac{\pi}{2}$  and  $-\frac{\pi}{2}$ .

Period:  $\pi$      $(-\frac{\pi}{2}, \frac{\pi}{2})$  Asymptote to Asymptote

input $x = \theta$	$-\frac{\pi}{2}$	$-\frac{\pi}{4}$	0	$\frac{\pi}{4}$	$\frac{\pi}{2}$
$y = \tan x$	U	-1	0	1	U

← Asymptotes →

www.analyzemath.com

Domain: all real numbers except odd mult. of  $\frac{\pi}{2}$

Range:  $(-\infty, \infty)$

Symmetry is an  
odd function  
 $\tan^{-\theta} = -\tan \theta$

$$y = 3 \tan(2x)$$

$$\omega = 2 \quad \frac{\pi}{\omega} = \text{period} = \frac{\pi}{2} \quad A = 3$$

x	$-\frac{\pi}{4}$	$-\frac{\pi}{8}$	0	$\frac{\pi}{8}$	$\frac{\pi}{4}$
2x	$-\frac{\pi}{2}$	$-\frac{\pi}{4}$	0	$\frac{\pi}{4}$	$\frac{\pi}{2}$
tan 2x	U	-	0	U	1
3 tan 2x	U	-3	0	U	3

Interval:

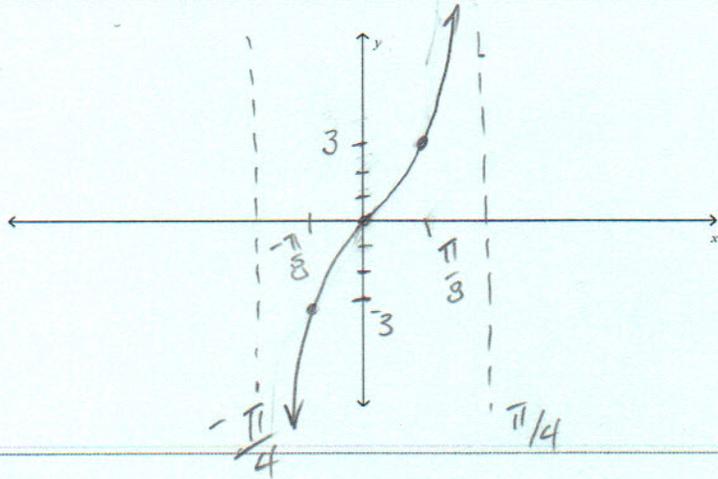

$$\left(-\frac{\pi}{2\omega}, \frac{\pi}{2\omega}\right)$$

$$\left(\frac{\pi}{2(2)}, \frac{\pi}{2(2)}\right)$$

$$\left(-\frac{\pi}{4}, \frac{\pi}{4}\right)$$

Avg:

$$0 + \frac{\pi}{4} = \frac{\pi}{4} \left(\frac{1}{2}\right) = \frac{\pi}{8}$$

$y = A \cot(\omega x) + B$  period =  $\frac{\pi}{\omega}$  For cotangent and appropriate interval is:  $\left(0, \frac{\pi}{\omega}\right)$ .

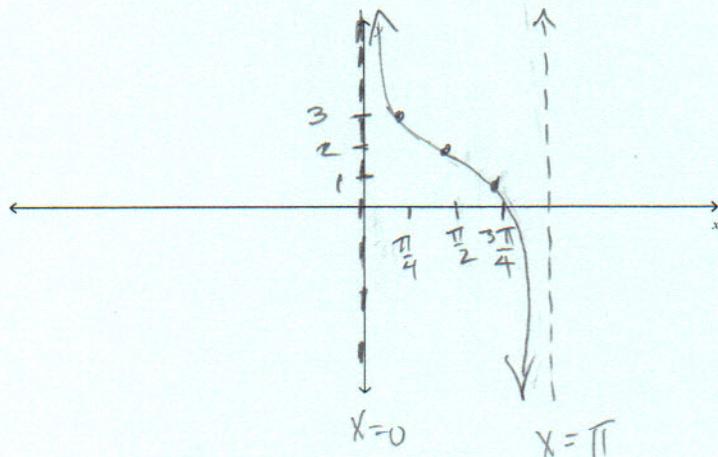

$$A = 1 \quad \omega = 1 \quad B = 2 \uparrow \quad y = \cot x + 2$$

x	0	$\frac{\pi}{4}$	$\frac{\pi}{2}$	$\frac{3\pi}{4}$	$\pi$
cot x	U	1	0	-1	U
cot x + 2	U	$3^{+2}$	2	$1^{+2}$	U

Interval:

$$\left(0, \frac{\pi}{1}\right)$$

$$(0, \pi)$$

Avg

$$\frac{\pi}{2} + \frac{2\pi}{2} = \frac{3\pi}{2} \left(\frac{1}{2}\right) = \frac{3\pi}{4}$$
